Command Prompt (CMD) / Terminal

2024/25/26 – Sascha Stojanovic

Brief history

- In 1960-70:
 - One PC was room-sized
 - Several User used the same PC via there terminal
- 1990-2000:
 - GUI era with windows 95
- 2010s-Present
 - Developer tools still relied a lot on cli's (git)

Command list I

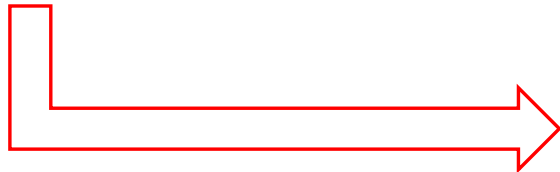

- Some cli's you don't need to install like "git", there are present on default
- `cd <..>` or `<../../..>` or `<path>`
 - When you open a terminal you see the path the terminal is pointing to
 - With "cd" you can navigate to another path
- `clear`
 - Clear out everything what is on your terminal
- `touch <file.txt>`
 - Existing file: Updates "last modified" + "last accessed" timestamps
 - Not existing file: Creates the file
- `grep <searchword> <file>`
 - Strg + f in a file

Command list II

- `pwd`
 - Print working directory (Where am I)
- `ls`
 - List files
- `ls -la`
 - List files with details
- `cp <file 1> <file 2>`
- `rm <file>`
 - Remove file
- `rm -rf <folder>`
 - Remove folder

Command list III

- `mkdir <foldername>`
 - Create a folder in the current directory
- `less <filename>`
 - Scrollable file
 - Copy more than one line
- `vim <filename>`
 - Tool to adapt content of a file
 - Commands inside of a file

<code>i</code>	# Enter insert mode
<code>ESC</code>	# Return to normal mode
<code>:w</code>	# Save (write)
<code>:q</code>	# Quit
<code>:wq</code>	# Save and quit
<code>:q!</code>	# Quit without saving
<code>dd</code>	# Delete line

Exersize

- Create a long text via “AI” of 2 DIN A4 pages (Browser)
- Open a terminal
- Navigate to documents
- Create a folder ”myFolder”
- Create a file “myFile.txt”
- Enter your AI text in there
- Create a copy of your file
- Adapt “myFile.txt” by deleting the 3rd line and by adding in the first line
”<Your name> is cool”
- Delete the copied file
- Copy the first 30 lines of “myFile.txt” and paste them into word
